

You currently have **six test files**, covering **37 individual tests**.

Test file	What it checks	Test s
<code>invoice.test.js</code>	Invoice calculations and numbering	4
<code>InvoiceCard.test.jsx</code>	Invoice card display, permissions, and button callbacks	7
<code>useInvoices.test.jsx</code>	Loading, API errors, transmission, invalid UEN, and failed creation	6
<code>DashboardPage.test.jsx</code>	Search, status filtering, empty results, navigation, and deletion	6
<code>invoices.test.js</code>	API GET, POST, PUT, DELETE, HTTP errors, and offline behavior	7
<code>roles.test.js</code>	EDIT and VIEW_ONLY permissions	7

What each suite means

1. Invoice utilities

Tests pure calculations:

- Line-item totals
- GST and invoice totals
- Next invoice number

2. Invoice card

Tests what the user sees and can do:

- Invoice details and total
- Draft/transmitted buttons
- Edit, delete, and transmit callbacks
- View-only restrictions
- Paid invoice restrictions

3. Invoice hook

Tests asynchronous invoice behavior:

- Loading state
- Successful loading
- Failed loading
- Valid UEN transmission
- Invalid UEN rejection
- Failed invoice creation

4. Dashboard page

Tests user workflows:

- Searching invoices
- Filtering by status
- Empty results
- Navigating to edit
- Confirming deletion

5. Invoice API

Tests communication with the backend:

- Listing invoices
- Creating invoices
- Updating invoices
- Deleting invoices
- Handling HTTP and network failures
- Offline mode

6. Roles

Tests security and permissions:

- No user cannot perform actions
- View-only users cannot modify invoices
- Editors can create
- Editors can edit/transmit drafts and failed invoices
- Editors can mark transmitted invoices as paid
- Paid invoices cannot be deleted
